

## FLOIXEM® STRIPIO

Water quality test strips.

Measures the 10 most important parameters.

Instant quality assessment.

### Description and applications:

Multiparameter strips designed to analyze the 10 key points to determine the quality of drinking water or the condition of a fluid in a heating/cooling system.

Suitable for water, water-glycol, or brine.

Immediate and reliable field results allow quick decisions without waiting for laboratory tests.

With an indication of the recommended values for an air conditioning circuit and reference values for drinking water.

Saves time in field analysis: no waiting, no reagent dosing, no calculations. Simply dip, wait 30 seconds, and read the results.

### Technical data:

Parameters and measurement ranges.

Total Alkalinity (ppm)	0	40	80	120	180	240					
pH	6,2	6,8	7,2	7,6	7,8	8,4					
Total Hardness (ppm)	0	100	125	250	450						
Free Chlorine (ppm)	0	0,5	1	3	5	10	25	50			
Nitrites + Nitrates (ppm)	0	2,5	5	10	25	50	100				
Copper (ppm)	0	1	2	5	10	30	100	300			
Total Iron (ppm)	0	0,25	0,5	1	2	5	10	25	50	100	
Aluminum (ppm)	0	0,2	0,5	1	3	10	30	100			
Sulphates (ppm)	0	100	250	500	750	1000	1500				
Clorides (ppm)	0	50	75	100	125	150	200	250	300		

### Properties:

- Suitable for water, water-glycol, or brine.
- Fast and accurate measurement of 10 parameters.
- Results independent of sample temperature.
- Saves time and costs in analysis.

### Instructions for use:

1. Remove one strip and close the container immediately.
2. Dip the strip for 2–3 seconds in the liquid.
3. Remove excess liquid with absorbent paper.
4. After 30 seconds, compare each parameter using the colour scale on the container.
