Easy and fast cleaning!

bioflux
HEALTH.SAFETY.ENVIRONMENT

Bioflux is a compact system, a ball valve with an integrated stainless steel filter and a magnet. This is our project, developed, engineered and produced in our internal departments.
The magnetic filter allows to divide the impurities inside the closed circuits of the heating systems (ferrous sludge, metallic filings and sand).
The magnet, in fact, attracts all the ferrous particles that are held on the silicone cap and can be easily removed. The system is really compact and innovative.
Bioflux keeps your domestic or industrial circuits constantly clean, in order to improve the water quality and preserve your water systems.

DESIGNATED USE: domestic and industrial.
COMPATIBLE FLUIDS: water and aqueous solutions of glycol.
FILTRATION RATE: 400 µm.
SUGGESTED TEMPERATURE: 5-120 °.
MAXIMUM PRESSURE: 16 Bar.
STANDARD THREAD TYPE: ISO 228.

CUSTOMIZATIONS AVAILABLES ON REQUEST.
(subject to minimum order quantity).

- Handle or lever. Colors: red or blue.
- Filtration grades available: 300, 500, 800µm.
- Replacement filter.
- Valve cap with a special handle for opening.
- Viton gaskets (resistant to high temperatures).

Additional versions availables on request:

- nickel plated brass
- without filter
- without magnet
